The Duke ADHD Program is part of the Department of Psychiatry at the Duke University Medical Center. We are a clinical, research, and training program.

In keeping with our mission to provide quality educational support for patients, family and community, the Duke ADHD Program has been offering free parent education seminars for the past four years. Programs

include issues related to such topics as helping your child do better in school and managing your child's medication.

All seminars are presented by faculty members in clinical psychology or psychiatry. Each presenter brings to the seminar a unique background of related professional experience and clinical research.
